

Artificial Intelligence (AI)

Artificial Intelligence (AI) is the simulation of human intelligence processes by machines, especially computer systems. These processes include learning, reasoning, and self-correction. Applications of AI include expert systems, speech recognition, and machine vision.

Machine Learning (ML)

Machine Learning (ML) is a subset of AI that allows software applications to become more accurate at predicting outcomes without being explicitly programmed. It uses algorithms and statistical models to analyze and draw inferences from patterns in data.

Data Science & Neural Networks

Data Science combines domain expertise, programming skills, and knowledge of mathematics and statistics to extract meaningful insights from data.

Neural Networks are a subset of ML inspired by the human brain, used for image recognition, natural language processing, and more complex tasks.
